How to read this report

Sections 1 and 3 explain **what** is in the apps. Section 4 explains **how it works**, flow by flow, with pictures. Sections 2 and 6 tell you **how to try out and test** it. You do not need technical knowledge to follow sections 1, 3, 4, 5 and 7.

1. What DailyMealBox is

A meal subscription platform with a pantry shop, company plans and a full delivery network

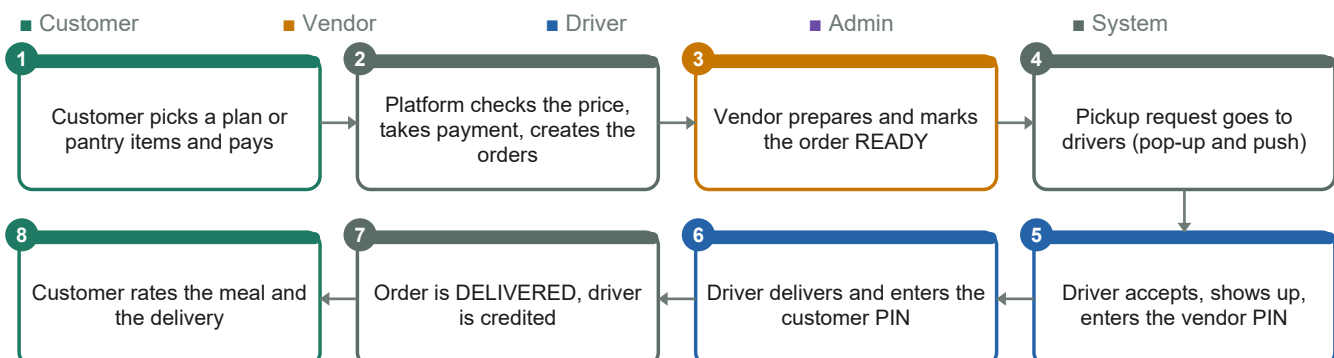

DailyMealBox lets people **subscribe to daily meals** cooked by local home cooks, cloud kitchens and restaurants. The meals are delivered to the customer's door in the time slot they choose (for example lunch or dinner). The customer can also order **pantry items** (groceries such as milk, bread or rice) from a pantry shop and receive them on the same delivery run. Companies can buy meals for their **employees** through a separate office portal.

The system is built first for Poland (Warsaw, currency PLN, European VAT rules) and supports other countries through different payment providers. Everything shown to customers, vendors and drivers can be used in **English, Polish, German, Russian and Ukrainian**.

The people who use it

Who	What they do
Customer	Chooses a meal plan, pays, tracks the delivery, skips or pauses days, orders pantry items, rates the food and the delivery.
Vendor	A kitchen (home cook, cloud kitchen, restaurant, catering) or a pantry shop . Adds meals or items, prepares orders, marks them ready, hands them to the driver.
Driver	Delivery partner. Accepts pickup requests, collects from vendors using a PIN, delivers to customers using a PIN or photo, earns per delivery.
Admin	The platform team. Approves vendors and drivers, sets cities, zones, slots, prices and fees, handles complaints, refunds and reports.
Company (Office)	A business that buys meal subscriptions for its employees and pays by invoice-ready payment.
Employee	Uses the customer app with meals paid by their company.

The big picture

The five apps

App	For	Where to open it (your website link plus the ending)
Customer app	Customers and employees	/user
Vendor app	Kitchens and pantry shops	/vendor (new vendors sign up at /restaurant/auth)
Driver app	Delivery partners	/food/delivery
Admin panel	Platform team	/admin (login at /admin/login)
Office portal	Companies	/office

All five apps open from one website. Type your website link and add the ending shown above, for example your-website/user for the customer app.

What is included

Area	Features
Meal subscriptions	Daily, weekly, fortnightly, monthly and yearly plans. Weekdays only or full week. Custom delivery days. Several slots per day. Family Box (several people, one order). Smart Rotation (rotate between several makers). One-time "Select" orders. Discounted trial. Pre-order launches of new dishes.
Pantry	Pantry shops sell grocery items. Customers pick items, days and slots, pay once, and the shop and driver fulfil each delivery with its own PINs. Items can have sizes (for example 500 g or 1 kg).
Delivery network	Pickup requests, PIN-checked handover at the vendor and at the customer, photo proof, driver shifts and attendance, earnings, cash limit, failed-delivery handling, pickup problem reports.
Payments	Przelewy24 (Poland), Stripe (other countries), Razorpay (India), wallet, and a safe "test payment" mode for testing. Prices are always calculated by the system.
Money and tax	Food VAT, delivery VAT and platform fee shown separately. Invoices by email or WhatsApp. Credit notes. VAT and settlement reports.
Company plans	Office portal: add employees, buy meals for them, see payment history.
Admin controls	City and zone setup, delivery slots, fees, holidays, language editing, notifications, legal documents with forced re-acceptance, customer segments, reports, security page.
Trust and safety	PINs checked by the system, GPS check at delivery, photo proof, GDPR requests, encrypted sensitive data, audit trail.

2. Try it out yourself

Everything you need to open the apps and test the flows

What you need

- A modern web browser (Chrome is recommended).
- The website link and the **admin login** we send you.
- Any phone number to sign in with (in test mode every number works).
- To try the driver app, use your phone, or the phone view in the browser.
- Optional: two or three browser windows (or a private window) so you can play the customer, the vendor and the driver at the same time.

Test mode

We switch the system to **test mode** for you, so that you can try everything without real money and without real text messages.

In test mode	What it means	When to use it
Login code is always 123456	No text message is sent. Any phone number can sign in with the code 123456.	Testing only. It must be switched off for real customers.
Test payment button	A payment option that always succeeds, so you can buy meals and pantry items without real money.	Testing only. It cannot be used with real money.
Platform clock	The whole platform works on the clock of the city you serve (for example Warsaw) for slots, cut-offs and "today".	Set once for your city.

First-time data to set up (as Admin)

Open the admin link and sign in with the admin login. A new system needs this basic data before customers can buy anything. Follow the order below.

1	City and zone Zone Management - Zone Setup: draw a delivery zone on the map and attach it to a city (for example Warsaw). Customers and vendors inside the zone can trade with each other.
2	Delivery slots Vendor Management - Delivery Slots: check the slots (breakfast, lunch, dinner) and their time windows.
3	Subscription plans Vendors create their own plans in the Vendor app (Subscription plans screen): name, length (day, week, fortnight, month, year), delivery days and an optional discount of up to 50 percent. VAT rates and the platform fee come from the platform terms, not from the vendor.
4	Fees Driver Management - Order-Based Delivery Fee: how much a driver earns per delivery. Fee Settings page: platform fee. Pantry Delivery Fee page: what customers pay per pantry delivery.
5	Payment provider Payments and Email - Payment Providers: switch on the provider for your country. In test mode the Test payment is always available.

6

Approve a vendor

Sign a vendor up in the Vendor app, then approve it in Vendor Management - Vendor Request. Give a meal vendor some meals; give a pantry shop the type **Pantry Shop** and some items.

7

Approve a driver

Sign a driver up in the Driver app, then approve in Driver Management - New Join Request. Then edit the driver in Deliveryman List and give the driver shifts (for example lunch) and the vendors the driver serves.

Test logins

Customers, vendors and drivers all sign in with a phone number and a one-time code. In test mode the code is always **123456**. Use three different phone numbers - for example 48600000001 (customer), 48600000002 (vendor), 48600000003 (driver). Use separate browser windows so you can be the customer and the vendor at the same time.

Good to know

The driver app can only see today's pickups, and slots only open inside their time window. To test at any time of day, an admin can switch on the **testing timing switch** in the timing settings (testing only).

3. The apps, screen by screen

What you will see in each app

3.1 Customer app (/user)

The customer app is built for a phone. A bottom bar gives quick access to the main areas.

Screen	What it does
Welcome, Sign up, Login, OTP	Sign in with a phone number and a code. Terms and privacy must be accepted.
About you, Goals, Diet, Location	First-time questions: goals, diet preferences, allergies, delivery address (map pin or typed). Addresses outside a service zone are refused and the nearest zone is suggested.
Home	Today's and tomorrow's meal, the next delivery and quick actions.
Plans	Browse makers and meal plans in your zone. Filters: diet, medical specialism, eco packaging, weekend delivery. Open a plan to see the menu, then Subscribe.
Subscribe sheet and Checkout	Choose duration, delivery days, slots and start date. The price is calculated live by the system. Choose the invoice type (receipt or company invoice with tax number), pay, and see the result.
Calendar	Every upcoming delivery day for the next days. Skip a day, undo a skip, change the meal for a day, see the maker's menu preview, see holidays.
Orders	Upcoming and past deliveries (meals and pantry), with status.
Tracker	Live status of today's order and where the driver is, and the delivery PIN to give to the driver at the door.
My subscription	Pause, resume, cancel, upgrade, downgrade, switch maker, add a slot (with a price preview), edit Smart Rotation for the next cycle.
Pantry	List of pantry items, item details with sizes, cart, and a pantry checkout where each item gets its own days and slots.
Wallet	Credit from skipped meals and refunds, and top-ups.
Profile and settings	Addresses (Home, Office, others), diet and allergens, invoice settings, notification switches, language, Select (one-time) orders, legal pages, support and service requests.

3.2 Vendor app (/vendor)

Kitchens and pantry shops use the same app. A bottom bar has six tabs: **Home, Orders, Menu, Earn, Growth, Profile**. A pantry shop sees pantry screens instead of meal screens.

Screen	What it does
Sign-up and approval	Vendor registers (type: home cook, cloud kitchen, restaurant, catering or pantry shop), uploads documents and kitchen photos. Admin approves. Home cooks must accept the cook agreement.
Home	Today's numbers, orders waiting, quick actions.

Screen	What it does
Orders (kitchen)	Today's and tomorrow's orders by slot. Read special instructions and tap Acknowledged, mark orders Preparing, then Mark all ready . Shows the pickup PIN for the driver and who accepted the pickup. Can resend the request to drivers.
Menu	Add meals with photos, price per day, slots, nutrition, Hot or Cold label (cold meals need reheating instructions), pre-order launches, daily dish name.
Pantry menu (pantry shops)	Add pantry items with price, photo, availability and sizes.
Pantry orders (pantry shops)	One card per delivery day and slot, with the items, customer and area. Tap Mark as Ready when the bag is packed.
Earn	Earnings and withdrawals, settlement statements.
Growth	Reviews and replies, stock levels, specialisms (medical diets), eco packaging claim, preferred delivery partner request, returned pantry bags to restock.
Subscription plans	The vendor creates its own plans (length, delivery days, optional discount up to 50 percent).
Subscribers	Who subscribes to this vendor and their plans.
Profile	Business details, delivery days, legal pages, support.

3.3 Driver app (/food/delivery)

Built for a phone, used while working. Drivers sign up with details and documents; the admin approves them. Only approved drivers can go online.

Screen	What it does
Welcome, Login, OTP, Sign-up	Phone login, two-step sign-up (details, documents), pending-approval page.
Home	Online or offline switch, today's earnings and deliveries.
Pickup request pop-up	When a vendor has orders ready, a pop-up (and a push notification) shows the vendor, the boxes and the earning. Accept to take the job. If another pickup request comes at the same time, it waits in line and appears next.
Route	One list for the whole run: first the pickups (one per vendor), then the customer drops. Customer drops stay locked until the pickups are done.
Pickup verification	Driver enters the vendor's 4-digit pickup PIN. Three wrong tries lock it until the vendor makes a new PIN. A problem button reports issues at the vendor (closed, not ready, and so on).
Delivery confirmation	Driver enters the customer's 4-digit delivery PIN or takes a photo. Then confirms payment to be credited.
Cannot deliver	Reason, a photo, and what happened to the box (kept, returned to vendor, left with neighbour, returned to the pantry shop).
Earnings, My shifts	Earnings per delivery, wallet; shift schedule with a confirm button 24 hours ahead and "can't make it" until 2 hours before.
Profile, Heat map, Chat	Documents, language, demand heat map, support chat.

3.4 Admin panel (/admin)

A web dashboard with a menu on the left. What an admin sees depends on their role (Super Admin, Accountant, Customer Service, City Manager, Marketing Manager, Web Manager, Fleet Manager).

Menu section	What is in it
Dashboard, Live map	Business numbers and a live map of drivers and orders.
Vendor management	All vendors, vendor requests, delivery slots, subscribers, commission.
Platform controls	Admin Controls (more than fifty switches, per city), alerts, scheduled jobs, holidays, zone delivery fees, home cooks, settlements, delivery partner requests, eco and medical approvals, hot/cold labels, review replies, bad-debt customers, credit notes, GDPR requests, segments, legal documents, live stock, pantry returns, growth, expansion demand, integrations (analytics, email marketing, WhatsApp), security.
Driver management	Join requests, list, reviews, bonus, earnings, shift requests, attendance, cash limit, order-based delivery fee (driver pay) and Pantry Delivery Fee (customer charge), support tickets, emergency help.
Customers, Kitchen partners, Office	Customer list, feedback, wallets; kitchen partners; office approvals, approved offices, office payments.
Orders, Food	All orders by status, manual order entry, food approval, categories, bulk menu upload.
Zones, Promotions	Zone setup and ranking; coupons, referral settings, banners.
Finance and reports	Financial overview, vendor and delivery withdrawals, transaction, order, tax and VAT reports.
Payments and Email	Choose which payment providers are on in which country; email settings.
Content and languages	Languages and translations (edit any text), About, Terms, Privacy.
Service, System, Developer	Service requests, business setup, theme, broadcast notifications, developer controls.

3.5 Office portal (/office)

Screen	What it does
Login, OTP, Onboarding	The company registers with its legal name and tax number (NIP, can be looked up), delivery address with a map pin, and a contact person. Admin reviews and approves ("under review" page until then).
Employees	Add employees by name, email and phone. If the person already has a customer account, it is linked.
Vendors	Shows only vendors that deliver to the company's address, with their meals.
Assignments	Choose employees, maker, meal, plan and slots. A system-calculated quote is shown, then the company pays.
Payment history	All company payments and invoices.
Company	Edit company details (approval status cannot be changed by the company).

4. How each flow works

Every important journey, step by step

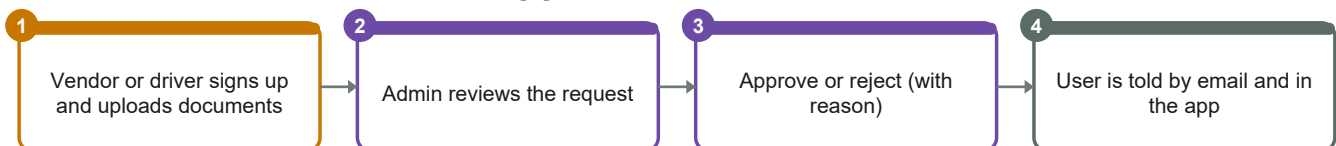

Each flow below shows who does what. Coloured boxes in the pictures: **green** customer, **orange** vendor, **blue** driver, **purple** admin, grey the system.

Flow 1 - Sign up and sign in (customer, vendor, driver)

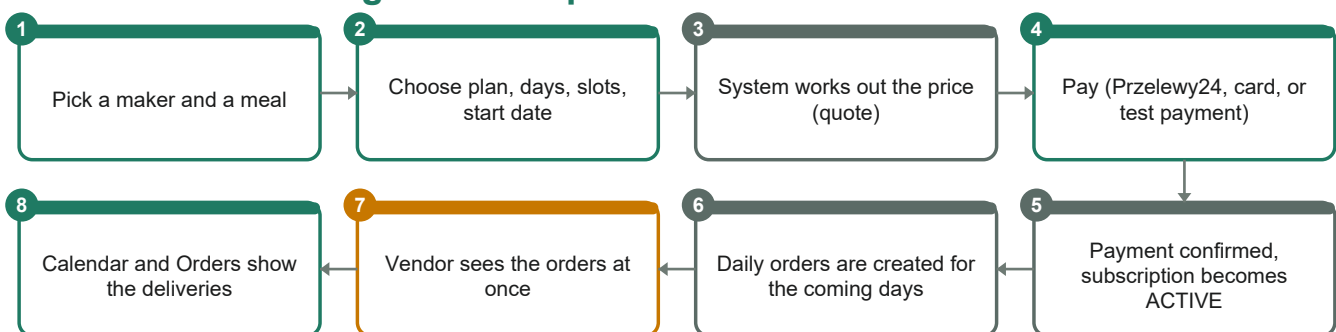

- A new phone number starts a short sign-up; an existing number goes straight in.
- Too many code requests are blocked for a few minutes. Wrong codes are refused.
- Customers accept the Terms and Privacy Policy. If the platform publishes a **new version** of a legal document, every app shows a blocking message until it is accepted.
- Vendors and drivers can sign up but cannot work until an admin **approves** them.

Flow 2 - Vendor and driver approval

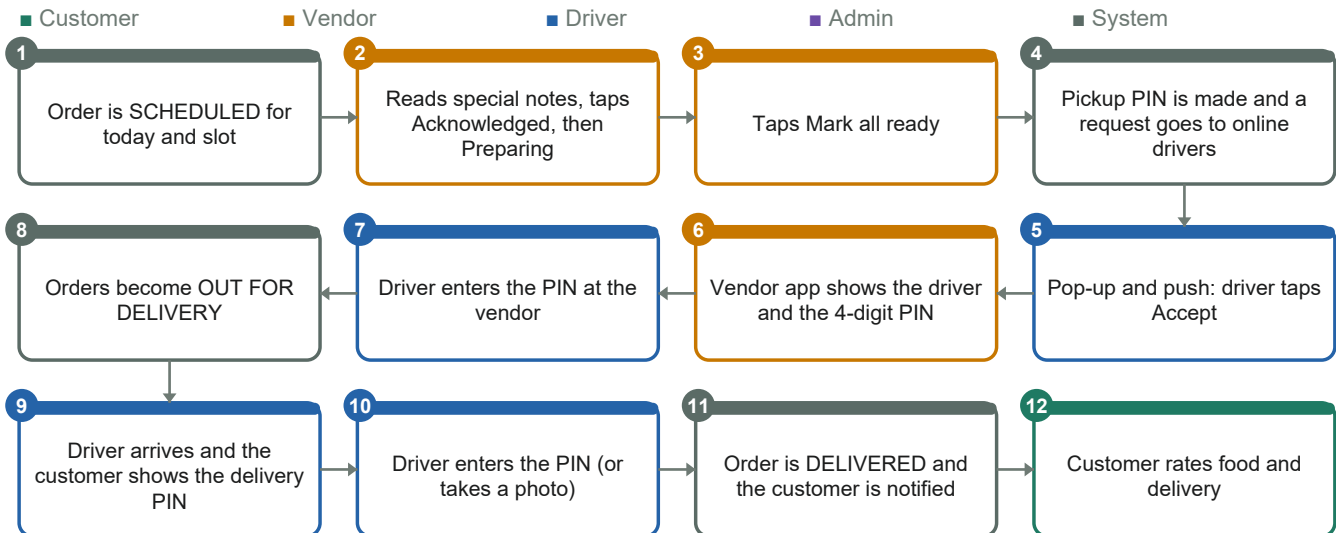

- Home cooks are on **Track 1** (not registered) or **Track 2** (registered business). Track 1 cooks must sign the cook agreement and are hidden from customers until they do. Monthly statements show how much they earned compared with the legal limit.
- Drivers are placed in shifts (for example lunch). Only drivers whose shift matches the active slot see that slot's pickups.

Flow 3 - Subscribing to a meal plan

- **The price is never taken from the phone.** The app shows the system's quote, and sends back the total the customer saw. If prices changed in between, the system refuses and asks the customer to review (a "prices changed" message).
- An unpaid subscription is only "pending". It becomes active only when the payment provider confirms it. If payment fails, the pending subscription is removed.
- Orders are created ahead of time (about ten days at a time), skipping weekends if the plan is weekdays only and skipping confirmed holidays.
- The address must be inside a zone served by the chosen maker. Otherwise the customer is asked to pick another maker or address.

Flow 4 - The daily meal, from kitchen to door

Status	Meaning
Scheduled	The order exists for that day and slot.
Preparing	The vendor is cooking.
Ready	Packed and waiting for the driver. The pickup request is sent only when every order of that vendor in that slot is ready.
Out for delivery	The driver collected it (vendor PIN checked).
Delivered	Handed over (customer PIN or photo).
Skipped / Failed	The customer skipped the day, or the driver could not deliver (see Flow 8).

Safety checks built into this flow

Vendor PIN: three wrong tries lock the pickup until the vendor makes a new PIN, and the admin gets an alert.

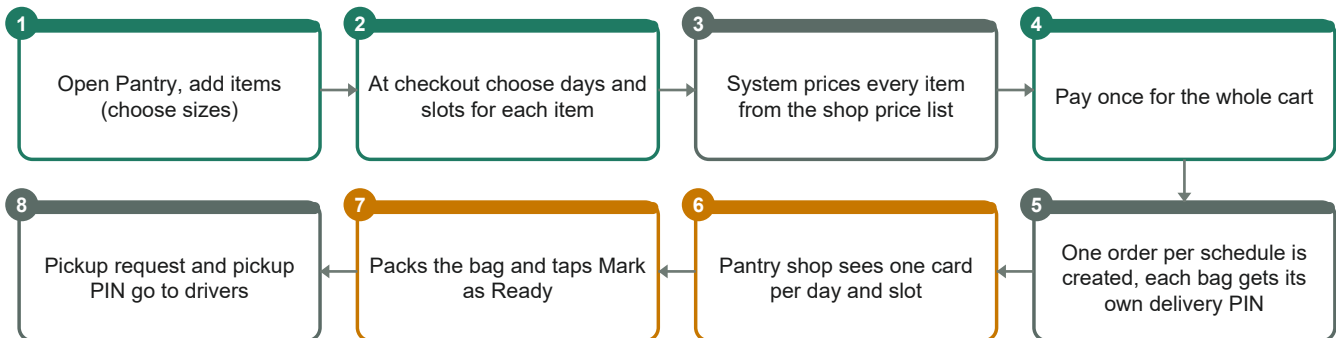

Customer PIN: only the driver who collected the box can complete the delivery, and only once. **GPS:** if the driver confirms far from the address, the delivery still completes but the admin gets a warning. **Slot timing:** a vendor can only mark orders ready inside the slot's time window.

Flow 5 - Skip, pause, change and cancel

- **Skip a day** (before the cut-off set by admin): the day is not delivered, the customer gets credit in the wallet, and Undo skip is possible before the cut-off.
- **Pause and resume:** limited days per period (set by admin). Deliveries stop while paused.
- **Change meal for a day:** allowed until the cut-off time (default 20:00 the evening before).
- **Upgrade, downgrade, switch maker, add a slot:** the app first shows a preview with the price difference, then creates a replacement subscription and a payment if needed.
- **Cancel:** the customer is asked to confirm; a "keep" option can win them back. Company-paid subscriptions cannot be cancelled or changed by the employee, and skipping them gives no wallet credit (the company paid).
- **Business holidays:** confirmed by a City Manager; deliveries are skipped, subscriptions extended, customers told.

Flow 6 - Pantry order (the grocery bag)

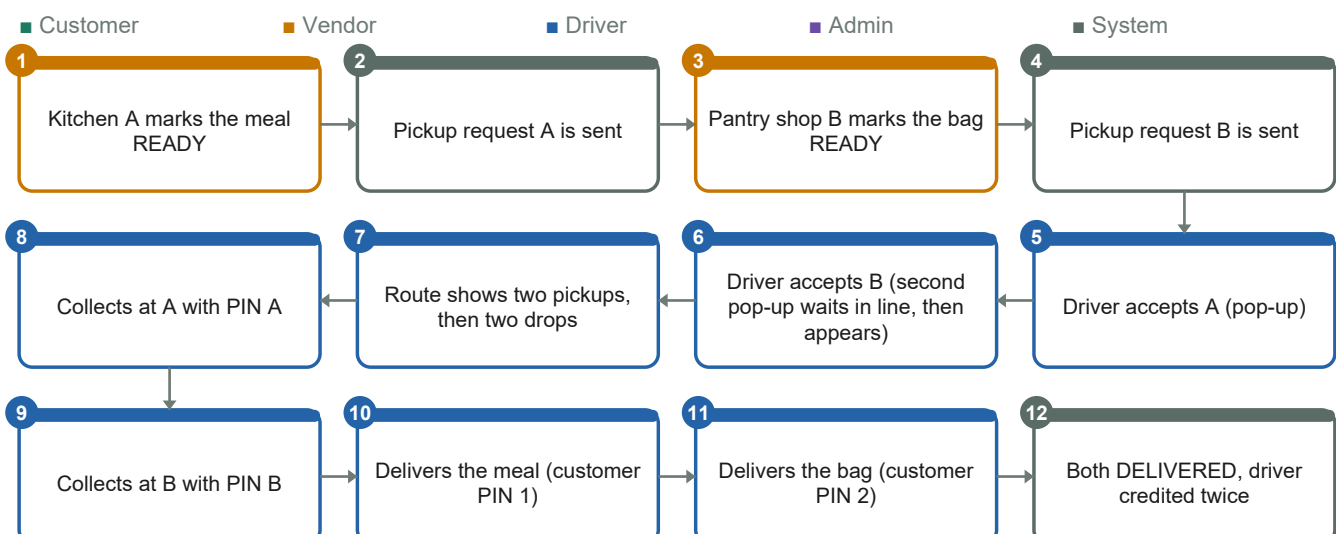

A pantry order is separate from the meal subscription. It is a one-time purchase that can be delivered on one or many days and in one or many slots.

- **Per-item schedule:** each item can have its own days and slots. Example: item A (50) for lunch and item B (200) for dinner costs **250 for the items**, not 500. Every item is charged once for each day and slot chosen *for that item*.
- **Sizes:** an item such as Rice can have 500 g and 1 kg. The size chosen is read by the system and charged at that size's own price. The order shows "Rice - 500gm".
- **Fees:** items + food VAT + **pantry delivery fee** (admin sets it; charged for every delivery day and slot, shown as its own line) + platform fee (once).
- **Safe checks:** items must belong to that shop and be in stock; dates must be real and not in the past (up to 90 days ahead); the slot must be running that weekday; negative quantities are corrected to 1.
- **Payment:** orders stay "pending payment" and are invisible to the shop and drivers until paid. A failed or cancelled payment cancels them.
- **The shop can mark ready only** for a paid order, only from the delivery day, and only inside the slot's time window. It cannot mark a bag delivered - only the driver's PIN can.
- **Resend:** the system can resend a pickup request that no driver has accepted, bags included. At the moment the Resend button is on the kitchen Orders screen; the pantry orders screen does not have its own button yet (see section 7).

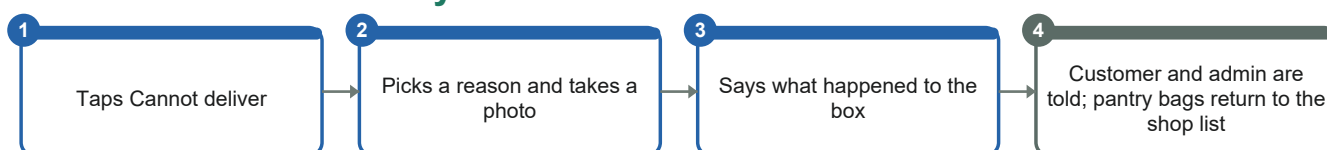

Flow 7 - A meal AND a pantry bag, two vendors, one driver

This is the key combined journey. The customer has a meal subscription (kitchen A) and also orders a pantry bag (shop B) for the **same slot**. One driver can collect both and deliver both to the same customer.

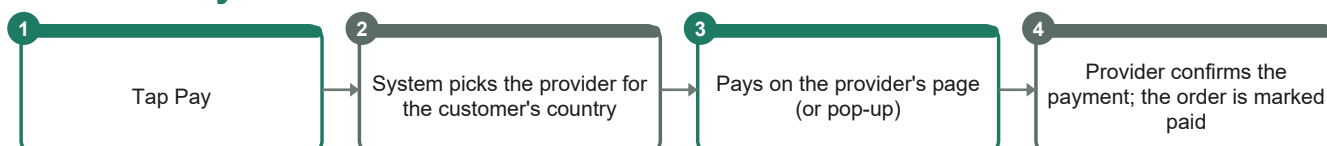

- **Each vendor has its own request, its own pickup PIN and its own pickup stop.** A request is created per vendor, per date, per slot.
- **Different slots are different requests.** Lunch bags and dinner bags never travel on the same request. A dinner bag cannot be marked ready during the lunch window.
- The driver's route shows **all accepted pickups together**. After collecting from the kitchen, the meal drop opens; the bag drop stays locked until the shop has been collected too.
- If two requests arrive together, the second pop-up **waits in line** and appears when the first is accepted or closed.
- The shop sees its pickup PIN on the Home screen of the Vendor app.
- A pantry shop does not need to be on the driver's usual vendor list: once the driver accepts its pickup, its stop appears.
- The driver is paid once for each drop: the meal and the bag are two deliveries.

Flow 8 - When a delivery fails

- Reasons: no one home, wrong address, customer refused, access problem, other. A photo is mandatory.
- Box outcomes: kept by driver, returned to vendor, left with neighbour, or (pantry only) **returned to shop**.
- A pantry bag returned to the shop appears in the shop's "returns" list. The shop taps **Restock** once the goods are back on the shelf. Admin has a returns report that can be downloaded as a spreadsheet.
- Only the driver carrying the box can report it failed.
- **Problem at the vendor before pickup** (closed, not ready, wrong items...): the driver reports it with a photo where needed. Serious reasons **block the pickup** until admin clears it or releases the driver, so the vendor can ask again.

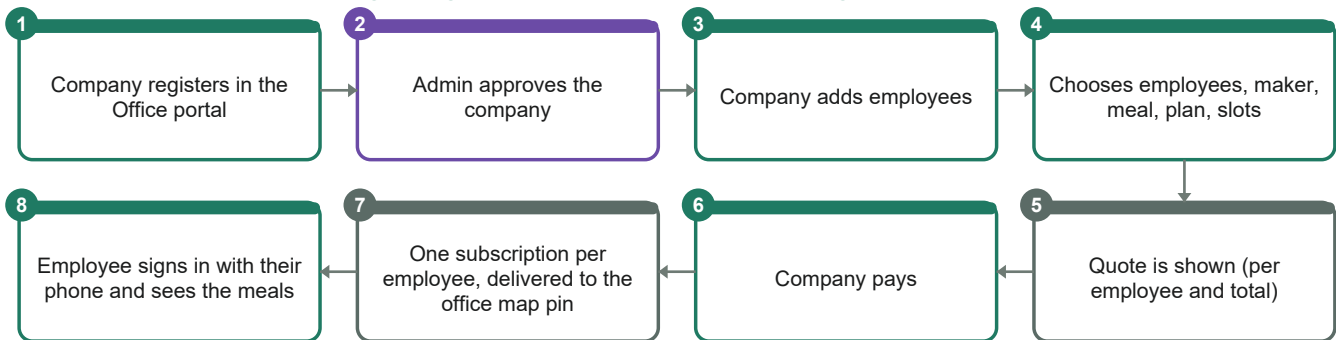

Flow 9 - Payments

Provider	Used for	How it behaves
Przelewy24	Poland (PLN)	Customer is sent to the bank page, then returns to the app. The order becomes paid when Przelewy24 confirms.
Stripe	Other countries	Same idea, hosted card page.
Razorpay	India (INR)	Pop-up in the app; the app then sends the result back to the system to confirm.
Test payment	Testing only	One tap, always succeeds.

- The amount is **always set by the system** and the currency follows the customer's country.
- If the customer closes the page, a background check settles open payments later.
- Admins can turn providers on or off per country. If no provider is available, the app says so clearly instead of failing.
- Refunds go through the same provider; test payments cannot be refunded.

Flow 10 - A company buys meals for its employees

- The meals go to the **office address**. The vendor sees them labelled with the company name.
- A second subscription for the same employee is allowed only if it does not overlap (different slot, vendor or period).
- Employees can see and rate their meals, but cannot cancel, change or move a company plan.
- The company gets business (VAT) invoice details; the company can cancel one assignment or remove an employee.

Flow 11 - Driver shifts, attendance and earnings

- Admin plans shifts. 24 hours before, the driver is asked to confirm; "Can't make it" is possible until 2 hours before, and the City Manager is alerted.
- Going online starts attendance. No-shows are detected and flagged in the admin attendance page.
- Every delivery credits the driver the fee admin set in "Order-Based Delivery Fee". Credit happens once per drop; tapping twice cannot credit twice.
- Cash limit and settlement screens control cash that drivers hold.

Flow 12 - Admin controls, languages and notifications

- **Admin Controls:** more than fifty switches (some per city). Changes reach every open app within about five minutes without a new release.
- **Languages:** English, Polish, German, Russian and Ukrainian. Admins can edit any text or add a language. Customer, vendor and driver apps are translated; the admin panel is in English.
- **Notifications:** push, in-app and email. Customers can switch types off, except critical ones (delivery, payment) which stay on.
- **Reports:** transactions, orders, tax and VAT, live stock, pantry returns, growth, bad-debt customers.
- **GDPR:** customers can ask for deletion; admin follows a 30-day checklist and personal data is anonymised while financial records are kept as the law requires.

5. Prices and fees explained

How the totals on screen are worked out

Meal subscription

For every delivery the price has these parts. The system adds them up and shows the total **before** the customer pays.

Part	Example
Food price (the vendor's price per day for the meal, times the days in the plan, less the vendor's plan discount if any)	20.00
Food VAT (rate set on the plan, for example 8 percent)	1.60
Delivery fee (zone fee or platform fee)	5.00
Delivery VAT (for example 23 percent)	1.15
Platform fee (if the admin sets one)	0.00
One delivery	27.75

A weekly full-week plan with lunch and dinner is 7 days times 2 slots = **14 deliveries**, so 14 times 27.75 per person, and so on for other plans. The annual plan and the trial are priced by admin settings and shown with their own disclosure text.

Pantry order

Total = items (each charged for its own days and slots) + food VAT on that + pantry delivery fee for every day-and-slot + platform fee (once)

Line	Example	How
Lunch item	50	1 day x 1 slot
Dinner item	200	1 day x 1 slot
Items total	250	Not 500: each item counts only for its own slot
Food VAT 8 percent	20.00	Rate set per vendor by admin
Pantry delivery fee	6.00	2 deliveries (lunch and dinner) x 3.00
Platform fee	2.00	Once per checkout
Customer pays	278.00	The payment is for exactly this amount

- The same day and slot shared by two items is **one driver visit** and the delivery fee is charged **once** for it.
- Where the settings live: **Pantry Delivery Fee** page (customer fee per delivery), **Order-Based Delivery Fee** (what the driver earns), **Fee Settings** (platform fee), vendor commission page (food VAT per vendor). Until the pantry delivery fee is set, pantry delivery is free for the customer.
- The amounts above are examples to show the method, not the live settings.

6. Step-by-step test scenarios

Follow these in order. Tick each result as you go.

Before you start

Complete the first-time setup in section 2 (zone, slots, plan, fees, an approved meal vendor with a meal, an approved pantry shop with items, an approved driver on a lunch shift). Use three browser windows: customer (/user), vendor (/vendor) and driver (/food/delivery), plus one for admin (/admin). Sign in with code 123456.

A. Sign-in and sign-up

#	Do this	You should see
A1	Customer app: enter a new phone number, then code 123456.	Sign-up questions start. After the last question you land on Home.
A2	Enter a wrong code.	The app refuses it with a clear message.
A3	Sign out and sign in again with the same number.	You go straight to Home, no questions.
A4	Vendor app: sign up a new vendor. Admin: approve it under Vendor Request.	Before approval the vendor sees a pending page. After approval the vendor dashboard opens.
A5	Driver app: sign up and upload documents. Admin: approve.	Pending page, then the driver home after approval.

B. Meal subscription

#	Do this	You should see
B1	Customer: Plans - open a maker - Subscribe. Choose a weekly plan, lunch, a start date.	A price breakdown appears (food, VAT, delivery, total).
B2	Continue to checkout and press Test payment.	Payment succeeds. The subscription shows as Active.
B3	Open Calendar and Orders.	The coming delivery days are listed.
B4	Vendor: Orders - pick the date.	The new order appears for that slot.
B5	Customer: skip one day.	The day is marked skipped and wallet credit is added (not for company plans).
B6	Customer: pause, then resume.	Deliveries stop and restart.
B7	Customer: change the meal for a day before the cut-off.	The new meal shows on that day.

C. Daily delivery with PINs (meal only)

#	Do this	You should see
C1	Vendor: open today's orders, tap Acknowledged on notes, then Mark all ready.	Orders turn Ready. A pickup request is sent.
C2	Driver (online): wait for the pop-up and tap Accept.	The vendor app shows the driver and a 4-digit PIN.
C3	Driver: open the pickup and enter a wrong PIN three times.	It locks. The vendor can make a new PIN.
C4	Vendor: generate a new PIN. Driver: enter it.	Orders become Out for delivery.
C5	Customer: open Tracker and read the delivery PIN.	A 4-digit PIN is shown.
C6	Driver: on the delivery stop enter a wrong PIN, then the right one.	Wrong PIN refused. Right PIN: Delivered.
C7	Driver: confirm payment on the delivered stop.	Earnings go up by the driver fee. A second tap does nothing.
C8	Customer: rate the meal and the delivery.	Both ratings are saved.

D. Pantry order

#	Do this	You should see
D1	Customer: Pantry - add two items. At checkout expand each item and give one lunch and the other dinner.	The summary shows the items total as the sum of both (for 50 and 200: 250, not 500).
D2	Admin: set a Pantry Delivery Fee. Customer: reopen checkout.	A Delivery Fee line appears and the grand total changes.
D3	Add an item that has sizes and choose a size.	The size shows in the cart and is charged at the size price.
D4	Pay with Test payment.	The orders become paid. They show under Orders.
D5	Pantry shop: open Pantry orders.	One card per day and slot. Orders that are not paid are not shown.
D6	Shop: tap Mark as Ready on a dinner card during the lunch window.	It is refused with a message about the slot window.
D7	Shop: tap Mark as Ready on the lunch card.	Success. A pickup request and a pickup PIN are created for the shop. The PIN appears on the shop's Home screen.

E. One driver, two vendors, same slot (meal plus pantry)

#	Do this	You should see
E1	Make sure the customer has a meal for today (lunch) and a pantry bag for today (lunch).	Both appear in the customer's Orders.
E2	Kitchen: Mark all ready. Pantry shop: Mark as Ready.	Two separate pickup requests, one for each vendor.
E3	Driver: two pop-ups appear one after the other. Accept both.	The second pop-up waits for the first and then appears.
E4	Driver: open Route.	Two pickup stops (kitchen and pantry shop), then two customer drops.
E5	Driver: collect from the kitchen with its PIN.	Only the kitchen pickup completes. The meal drop opens. The bag drop stays locked.
E6	Driver: collect from the pantry shop with its PIN.	Both drops are now open.
E7	Customer: read both delivery PINs (meal and bag). Driver: deliver each.	Each delivery completes with its own PIN. The driver is credited twice.

F. When things go wrong

#	Do this	You should see
F1	Driver: tap Cannot deliver on a stop. Give a reason, a photo and "returned to shop" (pantry bag).	The customer is told. The bag appears in the shop's returns list.
F2	Pantry shop: open returns and tap Restock.	The return is marked restocked.
F3	Driver at a vendor: report a problem such as "not ready".	The pickup is blocked until admin resumes it or releases the driver.
F4	Payment page: close it without paying.	The order stays unpaid and is not visible to the vendor or driver.
F5	Customer: try to book a pantry delivery for a past date (using a changed app call).	Refused with a clear message.

G. Company (office) plan

#	Do this	You should see
G1	Office portal: register a company. Admin: approve it.	The company can log in and see its pages.
G2	Add two employees (name, email, phone).	Employees appear in the list. A matching customer account is linked.
G3	Assignments: pick both employees, a maker, a meal, a plan and slots. Check the quote, then pay.	One subscription per employee. The vendor sees orders labelled with the company.
G4	Employee: sign in on the customer app with the phone number.	The company-paid meals show with the company name. Cancel and change are refused.

H. Admin

#	Do this	You should see
H1	Admin: Admin Controls - switch a control and save.	Open apps pick up the change within about five minutes.
H2	Admin: change a translation under Translations.	The new text appears in the app after refresh.
H3	Admin: add a holiday and confirm it. Then open Orders, reports and the live map.	Deliveries on that day are skipped and customers are notified. Report data matches what you did in the tests above.

7. Quality status and open points

What was checked, and what we recommend you decide

Automated checks that pass today

The checks below run the real system logic against test data. They were all run again on **7 October 2026** after the latest changes.

Area	Checks	Result
Pantry and meals together (customer, two vendors, one driver)	15 stages: pricing, size options, delivery fee, payment, shop ready, pickup requests, PINs, delivery, earnings, failed delivery, slot timing, one route with two pickups	15 of 15 pass
Pantry flow with the system clock set to other time zones (Los Angeles and India)	Same 15 stages	Pass in both
Payments	All providers and edge cases	46 of 46 pass
Subscription engine	Plans, days, slots, pause, holidays	18 of 18 pass
Office (company) flow	Employees, quote, payment, vendor view, employee app	16 of 16 pass
Failed delivery and pickup problems	Reasons, photos, ownership, blocking	5 of 5 and 5 of 5 pass
Languages	Translation system	23 of 23 pass
All apps	Every app starts and works without errors	Pass

What these checks do not cover

They do not use real payment providers, real phone notifications, Google Maps, or a real phone. Please test those with your own accounts (section 8).

What we found and fixed in the pantry flow

- A pantry bag marked ready never reached a driver (no pickup request, no pickup PIN). Now it does, on the same pickup system as meals.
- Pantry deliveries had no customer PIN until a driver opened the route. Now each bag gets a PIN when it is bought.
- Delivery PIN checks and driver payment did not work for pantry bags. They do now.
- Totals were wrong for carts with different slots (200 + 50 showed 500) and VAT was only worked out on one delivery. Both fixed on the system and in the app.
- Items with sizes made checkout fail. Sizes are now read and charged at their own price.
- The platform fee was always zero because it was read from the wrong setting. Fixed.
- There was no customer delivery fee for pantry. Added, with its own admin page.
- Dates and slots were not checked; "today" and slot times depended on the computer's clock or a fixed country. Now everything uses the platform time zone.

- A driver with several pickups saw only the first. The route now shows all accepted pickups, and pop-ups queue instead of replacing each other.
- Shops could set any status or mark ready at any time. Now limited to preparing and ready, for paid orders, in the slot window.

Points we recommend you decide or know about

Topic	Detail	Suggestion
Pantry and subscription are separate	A pantry order does not follow the meal subscription's days, pause or skip.	Decide if pantry should ever attach to a subscription (for example "add milk to every lunch").
Drivers can see PINs	The route data sent to the driver app includes the customer's delivery PIN and the vendor's pickup PIN. This was already the case for meals.	If PINs are meant to prove presence, the driver app should stop showing them and rely on the customer and vendor reading them out. Needs a design decision.
Collect everything first	A driver must finish all pickups before opening a customer drop.	Fine for now. A later option is to allow delivering one vendor's boxes first.
Driver must be online in the app	The pickup pop-up only opens if the driver's online switch inside the app is on. Otherwise a push may arrive but no pop-up shows.	Tell drivers to stay online while working. A clearer "you are offline" notice could be added.
Pantry shop screens	A pantry shop sees its pickup PIN only on the Home screen (live). The pantry orders screen has no Resend button and no PIN panel of its own.	Add a PIN panel and a Resend button to the pantry orders screen (small change; the system side is ready).
Phone and email encryption	Addresses, bank details, ID numbers and secrets are encrypted. Customer phone and email are stored in plain form because they are used to sign in.	Approve the planned "encrypted value plus search index" approach (about 3 to 4 days).
Driver document images	Stored on public links.	Move to private, short-lived links.
Open file uploads	Photo and document uploads accept files without sign-in because sign-up uses them.	Add protection once the sign-up flows are traced.
Real keys	Test mode is for testing only.	See section 8.

8. Before going live

What to arrange for real customers

Your technical team (or we) take care of the technical settings. This is the list of things to decide and arrange.

Item	Why it matters
Switch off test mode	Removes the fixed login code 123456 and the Test payment button. Without this, anyone could sign in.
Real payment accounts: Przelewy24 (Poland), Stripe (other countries), Razorpay (India, if used)	Needed to take real payments. Each provider must be able to send payment confirmations back to your website.
Your final website address	Payment providers send customers back here, and invoice links in emails use it.
An email sending account	For invoices, receipts, approvals and password resets.
Google Maps and push notification accounts	Maps, address search and notifications to phones.
Protection of sensitive data	Sensitive data is encrypted. The secret that unlocks it must be stored safely in two places. If it is lost, that data cannot be read again.
Your city's clock	Slots, cut-offs, shifts and daily jobs follow it.
Optional: email marketing and WhatsApp invoices	Can be added later in Admin - Integrations.
Backups	Regular backups of your data, and written confirmation from your hosting provider that data is encrypted where it is stored.

Suggested go-live checklist

1	Run the whole of section 6 once on the live-like setup, with a real phone for the driver.
2	Turn on real payment providers and make one small real payment and refund per provider.
3	Confirm notifications reach a real driver phone with the app closed.
4	Create the real zones, slots, plans, fees and the Pantry Delivery Fee.
5	Approve the first real vendors and drivers, give drivers shifts and vendor assignments.
6	Switch off test mode and make sure backups are in place.

9. Glossary

Words used in this report

Word	Meaning
Slot	A delivery time window such as breakfast, lunch or dinner. Admin can change them.
Zone	An area on the map where deliveries are offered.
Plan	How long and how often a subscription runs (for example weekly, Monday to Friday).
Quote	The price the system calculates before payment. Always the final truth.
Pickup request	A message to drivers that one vendor's orders are ready for collection in a slot.
Batch	The group of boxes in one pickup request (one vendor, one date, one slot).
Pickup PIN	A 4-digit code that proves the driver is collecting from the right vendor.
Delivery PIN	A 4-digit code the customer gives to the driver to prove the handover. Each meal and each pantry bag has its own.
Pantry shop	A vendor type that sells grocery items instead of cooked meals.
Bag	One pantry delivery for one day and one slot.
OTP	One-time password: the code sent to a phone to sign in.
Test payment	A fake payment that always succeeds; only for testing.
VAT	Value added tax. Food and delivery have separate rates.
NIP	Polish company tax number, used for company invoices.
GDPR	The EU data protection law (for example the right to delete your data).
City Manager	An admin role that looks after one city: holidays, shifts, alerts.
